

LINETIK

ZUMTOBEL

# LINETIK

The perfect silhouette

**Less is more. The elegant LINETIK speaks a clear yet minimalist design language. With a cross-section measuring just 25 x 25 mm across all pendant bodies, as well as across the lighting elements and stands of all free-standing luminaires, the design is ultra-slim yet robust – and can be assembled in just a few steps, illuminating your room in a matter of minutes.**

# Design

Minimalism meets comfort

**During the development of the LINETIK free-standing and pendant luminaires, our team of designers and engineers challenged the established principles of lighting and office design. Zumtobel found the perfect partners in Simon Fisher and Matt Free from F Mark Ltd, along with Luke Smith-Wightman, to work on an ambitious shared vision: developing a lighting concept that would deliver maximum lighting comfort in any workplace, while at the same time carefully minimising consumption of valuable resources.**

# Colour

Creative freedom

**The uncompromisingly geometric design enables you to express your personality through colour. Free-standing luminaires make a confident design statement in black or white, while the pendant luminaires offer yet more scope for creative freedom: You can choose the colour of the luminaire, the reflector frame and the converter housing. Opt for coordinated elements or specify your own combination of contrasting reflectors or even select a converter housing that takes on the colour of the ceiling. With LINETIK, the choice really is yours.**

# Pendant luminaires

Maximum lighting comfort, minimal dimensions

Innovative lighting technology and the extraordinary length of the lighting element make sure that light is directed just where you need it – right into your workspace. This high-performance design with a luminous flux of around 6000 lumens ensures that light is distributed evenly, even across shared workplaces. With a UGR < 16 and a luminance of < 3000 cd/m<sup>2</sup>, this lighting solution features outstanding anti-glare characteristics. An indirect light distribution of 60 percent and a direct light distribution of 40 percent create a comfortable working environment.

DC String technology by Tridonic allows electricity and data to be transferred through the cable, while direct and indirect components are controlled separately via DALI or basicDIM wireless. The elegant wireless solution allows you to adjust the light with complete flexibility to suit the space, the cable length and the height and reflectivity of the ceiling.

# Free-standing luminaires

Lighting – done your way

The LINETIK line of free-standing luminaires enables you to create solutions for unusual room shapes with complete flexibility. The long lighting head illuminates workspaces with a uniquely even and balanced light of around 500 lux, ensuring full compliance with the requirements of EN 12464. Indirect light directed towards the ceiling generates a welcoming atmosphere in your space.

Integrated light and presence sensors make it easy for you to support your employees with the right light throughout the day and to simultaneously save energy. Plus you can configure the system at any time to adjust the direct and indirect lighting components to suit your needs, either via the direct controls on the luminaire or via the optional remote control.

Workplace for six people: Even lighting with two free-standing luminaires

Double or single workplace: Lighting from just one free-standing luminaire complies with the EN12464 standards

---

## Slimline design

With a cross-section of just 25 x 25 mm, LINETIK is the slimmest professional office luminaire on the market. No other product that satisfies the required standards can compete with these dimensions – and no other product boasts such a consistently linear concept with cables that transfer electricity and data directly to pendant luminaires.

---

## Impressive illumination

LINETIK strikes the perfect balance between room and workplace lighting. This powerful solution with zero glare offers full compliance with all the requirements of EN 12464. The individually adjustable direct and indirect components allow you to adjust the light to suit your specific space and situation with complete freedom and flexibility.

---

## Architectural integration

The minimalist and linear design of the LINETIK range is easy to integrate into any architectural concept – whether you opt for white or black or for pendant fittings with a luminaire head, reflector and converter housing in your own unique colour combination.
